

LITTLE PAPER

www.littletsukiinu.io

INTRODUCTION

Little Tsuki Inu is an NFT technology project and the first to produce tangible NFTs, or as we call them, "tNFTs." All of our tNFTs contain tangible elements that can be enjoyed and displayed in the real world.

This NFT project is taking the next logical step in NFT/blockchain technology by bringing it to the physical world. Currently, we are creating custom works of art using our tNFT technology. Part of our vision is to release this tech as an app and allow everyone with a cellphone to tokenize any physical object they want and create their own tNFTs. We want to bring this fun, new tech into the palm of your hand!

Little Tsuki Inu is a very ambitious project that has many different facets and utilities. This "Little Paper" will be focusing on only the tNFT and NFT aspect of the project outside of the app and will evolve as time goes on. Future white papers will describe in more detail the Little Tsuki tNFT creator app and other utilities of the token.

tNFTs

Simply put, a tNFT is where any real-world object is paired with the digital blockchain to produce a fast and secure chain of custody for that item. It's our unique approach to tokenizing physical objects. tNFTs come in various forms. Initially, our tNFTs started out as digital items, or normal NFTs, with 3D codes embedded within which allowed the owner of the NFT to 3D print a unique model. The only way to get this model was to own the digital NFT, which contained our 3D code. Our tNFTs also contain custom music tracks written by one of our developers! As the technology has taken shape, we have been able to expand and iterate upon this idea. Currently, we are able to produce physical, real-world items that are themselves the tNFT. Embedded within our real-world items are NFC chips which owners can scan with their phone to verify a chain of custody on the blockchain. As we continue to build our marketplace and app, we will be working with NFT artists to collaborate on more real world tNFTs with the final aim of delivering this application to everyone so they too can participate in the creation of their own tNFTs.

WE LOVE CREATIVITY

We currently have all of our tNFTs as well as our normal NFTs listed on Opensea under our project name. There are always new drops and collections being released. As the project and collaborations expand, the art will continue to grow in creativity and diversity as well. When the Little Tsuki Inu marketplace becomes available, it will have all our NFTs and tNFTs, and will feature some exclusive pieces from talented artists that will only be available in our marketplace! The Little Tsuki Inu marketplace will be unique and focused around tNFTs. The marketplace will also allow patrons to commission a tNFT from us directly, or have their own piece tokenized and turned into a tNFT by us. Anyone can release and present a tNFT in our marketplace. We are looking forward to working with artists and other creative individuals; we can't wait to see the eclectic tNFTs they come up!
